GEOSPATIAL DISTRIBUTED ENTERPRISES

Sandia National Laboratories, a subsidiary of Lockheed-Martin Corporation, is contracted by the Department of Energy (DOE) to operate and maintain Sandia National Laboratories in New Mexico (SNL-NM) and California. SNL-NM operates about 1000 facilities/structures/buildings and all associated utilities/infrastructure, including gas, electric, water, sewer, roadway, sidewalks, parking, permitted areas, storm, fences, and security boundaries.

Maintaining this much data requires accurate and up-to-date documents that reflect current conditions for interior and exterior interfaces to the structures, as well as surface and buried utilities covering 9,000 acres. Using ProjectWise and Bentley GeoGraphics, SNL-NM maintains current and accurate as-built drawings for both geospatial and building data.

Power Through Integration
