

## Bentley® Substation™

### Integrated Electrical and Physical Design for Intelligent Substation Infrastructure

Designing or upgrading an electric substation is a complex task that combines the placement of physical objects and the distribution and control of electrical power. Bentley Substation addresses this challenge by providing a comprehensive, integrated set of capabilities that make the design process faster, easier and more efficient. Bentley Substation is a valuable productivity tool for utilities, engineering firms (EPCs), and rail owner/operators who design and operate substation infrastructure.

*Intelligent electrical design – create one-line drawings, protection and control schematics, and panel layouts.*

*3D modeling – visualize your design for clash detection, clearance checking, and presentations.*

*Automatic report generation – create an accurate bill of materials and other lists based on the content of your drawings.*

#### Intelligent Information Model

Using an intelligent information model, Bentley Substation combines intuitive 3D modeling, powerful electrical design functionality, and automatic bill of material and report generation, all working together to get your project completed, approved and online in the shortest possible time. The product operates in conjunction with Bentley® ProjectWise® before a powerful engineering content management system to facilitate the design workflow.

#### 3D Physical Design

A 3D model makes it much easier to visualize and document substation plans, create accurate bills of material and execute clash detection and clearance checking. In the past, 3D models were often omitted from substation designs due to the complexity of the required software, but Bentley Substation offers new, easy-to-use 3D modeling tools. Each object in the model is linked to the parts database, providing component data, symbol information, and the contents of any accessory kits associated with the part. Hook points connect related objects, so they automatically snap together and move as one unit when repositioned. There are also tools to design or analyze the grounding grid, lightning protection and cable sag.

#### Electrical Design

Bentley Substation incorporates an established electrical design engine (promis•e®) which provides many time-saving functions. Wires break and heal automatically as symbols are placed or removed. Wire numbers can be assigned automatically and connections are recognized by the software. When symbols are placed, unique IDs are prompted by the software, and related symbols are cross-referenced automatically. In this way, you can generate single line drawings and protection and control schematics quickly without errors. As with the 3D model, the integrated

parts database allows you to associate components in your design with specific parts information to generate an accurate bill of material and other documentation.

Work is organized into projects, allowing many drawings to be linked for cross referencing, error checking and list generation. Changes made in one part of the project are immediately reflected in the rest of the project, drastically reducing editing time and ensuring accuracy. Project-wide default settings ensure adherence to standards.

#### Error Checking

As you create drawings, Bentley Substation alerts you to possible errors. This significantly reduces manual checking, improves the overall accuracy of the drawing and prevents costly corrections later on. Error conditions include short circuits, duplicate device identifiers, over-assignment of contacts, and more.

#### Automatic Generation of Documentation

Superior documentation is provided by a project database linked to the schematic, allowing bills of material, purchase order lists, job cost estimates, panel layouts, terminal plans, wire lists and wiring diagrams to be generated automatically. This automatic creation of documentation minimizes errors and ensures that any design revisions are quickly reflected in the reports.

#### Distributed Engineering

As the design work for a substation typically involves people working at different locations, there is a need to coordinate this activity to avoid errors, delays and miscommunication.

Bentley ProjectWise software is a perfect complement to Bentley Substation for this purpose. It provides robust enterprise-level engineering content management and team collaboration capabilities to support the substation design workflow.

## SYSTEM REQUIREMENTS

### Software:

Microsoft Windows XP or Windows Vista (32 bit version or 64 bit version\*), MicroStation®, ProjectWise Integration Server, Supports Oracle 9i or 10g, SQL Server 2005 or SQL Express 2005, and SQL Server 2008 databases (an express version of SQL Server is included)

### Memory:

2 GB recommended

### Hard Disk:

650 MB free hard disk space minimum

### Display:

1024x768 screen resolution minimum

\*On 64 bit version of Windows Vista, Bentley Substation runs as a 32 bit application

## ABOUT BENTLEY

Bentley Systems, Incorporated is the global leader dedicated to providing comprehensive software solutions for sustaining infrastructure. Architects, engineers, constructors, and owner-operators are indispensable in improving our world and our quality of life; the company's mission is to improve the performance of their projects and of the assets they design, build, and operate. Bentley sustains the infrastructure professions by helping to leverage information technology, learning, best practices, and global collaboration – and by promoting careers devoted to this crucial work.

For more information, visit [www.bentley.com](http://www.bentley.com)

## BENTLEY OFFICES

### Corporate Headquarters

685 Stockton Drive  
Exton, PA 19341 USA  
1-800-BENTLEY (1-800-236-8539)  
Outside the US +1 610-458-5000

### Bentley Systems Europe B.V.

Wegalaan 2  
2132 JC Hoofddorp  
Netherlands  
+31 23 556 0560

### Bentley Asia

Unit 1402-06, Tower 1,  
China Central Place,  
No. 81 Jianguo Road,  
Beijing, 100025, China

## BENTLEY SUBSTATION AT-A-GLANCE

### General/System Features

- Command protection
- One-click navigation
- Search tool
- Fully open API
- Bentley SELECT® licensing
- Project-wide data editor

### 3D Modeling Features

- Intelligent objects linked to parts database
- Hook points automatically align and join related objects
- Grounding grid layout tool
- Wire sag algorithm
- Lighting protection (rolling sphere method)

### Electrical Drawing/Design Features

- Project-based design organization
- ANSI/IEEE or IEC electrical symbol catalog included
- Manufacturers parts databases and symbol catalogs
- Ladder builder
- Global find/replace wire property
- User-definable device tag formats
- User-definable wire layering
- User-definable wire tag formats
- Cable termination diagrams
- Automated balloon callouts
- Panel layout mode
- BOM explorer

- Dynamic symbol text
- Automatic component align
- Global find/replace symbols & symbol properties
- Automatic wire numbering
- Automatic page numbering
- Automatic page save
- Automatic project copy
- Page copy, rename, move
- Global title block replace
- Automatic device tagging
- Custom symbol creation
- User-definable circuit macros & symbols
- Symbol migration tool
- AutoCAD block migration tool
- Intelligent off-page wire references
- Automatic wire/line break & heal
- Automated circuit copy
- Wire crossing/connection preferences
- User-definable wire property display
- Catalog manager
- Cable manager
- PLC schematic generator
- Automatic PLC addressing
- PLC I/O import
- Automated symbol rotation
- Real time cross-referencing across multiple pages
- Multi-user/discipline collaboration

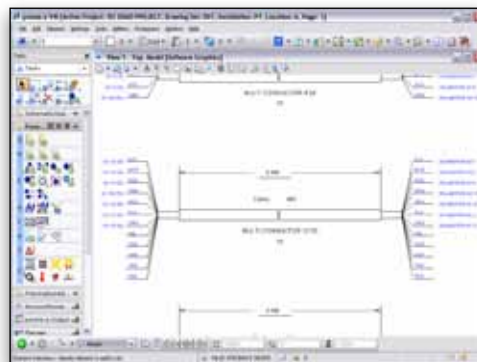

- Multiple undo/redo capabilities
- Instantaneous real time error checking
- Forced wire routing
- Dynamic wire diagrams
- Terminal/pin-plug manager
- Graphical terminal/pin-plug plans
- Spare parts utility
- Multi-language drawing text
- Drawing mode manager
- Shortest distance wire routing

### Reports and Documentation

- Automatic report generation
- Bill of materials
- Wire list
- Wire labels
- Wire length calculation reports
- Cable list
- Terminal-plug list
- PLC list
- Job costing report
- Field wire list
- Revision history reports
- Custom report designer
- Output reports to TXT, CSV, HTML, RTF, PDF, XLS, MHT files
- Project publisher

### Special Utilities

- Project builder
- Hoffman panel builder
- Panduit selection tool

Cable diagrams – display connection information automatically.

Grounding grid layout function – configure the grid as part of the 3D model.
